

Provider-Network Data

Vericred's provider-network API provides details on which doctors and facilities participate in what networks, and enables features like shop-by-doctor.

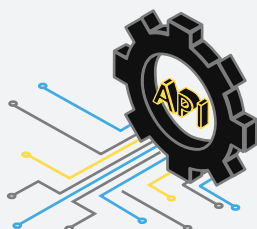

Use Cases

HEALTH INSURANCE QUOTING, SALES & ENROLLMENT	BENEFIT ADMIN OR HEALTH AND WEALTH PORTALS	PHYSICIAN REFERRAL PRODUCTS	PROVIDER SEARCH DIRECTORIES	DOCTOR APPOINTMENT APPS
COMPLETENESS		MAPPING		USABILITY
Individual Under 65, Small Group, Dental, Medicaid & Medicare Advantage: All Networks	Network level HIOS Plan ID (Individual under 65 & small group plans)	Normalization of provider names (eg. Dr. J. Smith = Dr. John T. Smith = Dr. J.T. Smith)	REST API	
Mid-Large Group: Most non-curated networks	Contract ID (Medicare Advantage plans)	Solution for "multiple NPI" problem	Bulk Files	
UPDATES		INTEROPERABILITY		SERVICES
7-30 day update cycle depending on the network	Match networks to plan designs to determine provider/plan name participation		Alerts and webhooks when doctors or other providers drop out of a network or plan	
Networks and specialties are maintained at the address level			Disruption Analysis API to analyze which NPIs are in-network and which are out-of-network for a set of Network IDs
